SUMMARY

Senior full-stack software engineer with 13+ years of experience building scalable SaaS applications, regulated healthcare platforms, and modern AI features. Specialized in bridging high-level architectural strategy with disciplined execution, using spec-first design and test-driven development to deliver production-ready software efficiently. Deep background in web/cloud architecture, cybersecurity penetration testing, and regulatory compliance (FDA, HIPAA) for enterprise and early-stage companies.

CORE SKILLS

- **AI / ML:** LLM agents & tool use (MCP) · RAG (Qdrant, pgvector) · fine-tuning · structured outputs · Anthropic, OpenAI and Gemini APIs · LiteLLM · OCR/vision (EasyOCR, Cloud Vision)
- **Frontend:** React 19 · TypeScript · Next.js · Vite · Tailwind / shadcn/ui · visx / Highcharts · React Native / Expo · Capacitor · Three.js (R3F) · i18n
- **Backend:** Python (FastAPI) · Node/Express · PostgreSQL · Redis/BullMQ · Firebase Supabase · Stripe · Twilio
- **Quality & Delivery:** Vitest · Playwright · pytest · Cypress · GitHub Actions · Docker Kubernetes · AWS · GCP · Cloudflare · Vercel · Git
- **Domain:** HIPAA/SOC 2 product requirements · FDA 510(k) / SaMD · multi-tenant SaaS

EXPERIENCE

Full Stack Software Engineer – Bitmotive, LLC

Feb 2026 – Aug 2026 · Contract

- Turned static matplotlib model-validation images into interactive analytics (visx zoom, brush and tooltips) for Bland-Altman, scatter and error-distribution charts. Added metric cards (MAE, RMSE, R^2, normality) and one-click PDF report**s** for clinical and regulatory teams.
- Migrated E2E test suite from Cypress to Playwright (200+ tests)**,** and configured to run against production build in CI to prevent regression.
- Built the backend of an OCR pipeline that reads burned-in text on ultrasound frames. It recovers estimated delivery dates the product was missing and redacts patient identifiers before images are stored.
- Shipped FDA-compliant MFA (setup wizard, challenge flow, recovery codes, institution-level enforcement) and a searchable audit-log viewe**r** with CSV export for global admins.
- Localized the frontend (i18next) and FastAPI backend (Babel) in English, Spanish and Portuguese.

Full Stack Software Engineer – 24hrcarunlocking.com

Aug 2023 – May 2026 · Full-time

● Rebuilt the WordPress marketing site on Astro + Sanity + Cloudflare (~$6,700/yr saved).

● Retrofitted mission critical API endpoints with Playwright testing to ensure system-wide reliability and catch breaking changes in CI/CD before code merges.

● Shipped *RescueBot*, an in-app scheduling assistant on a fine-tuned GPT-4o-mini model that collects service details conversationally, quotes from live pricing, and hands off to a human on request.

● Architected *AmeniLink*, a multi-tenant property-management SaaS for web, iOS and Android (React 19, TypeScript, MUI, Firebase, Capacitor) with invitations, RBAC and service requests.

Staff Engineer – Southern Made

Apr 2024 – Sep 2024 · Contract

● Designed the architecture for the DORITOS® Crash the Super Bowl submission review platform on GCP, with Gemini and Cloud Vision automatically reviewing user submitted entries. The design was reviewed and approved by PepsiCo's CISO (Chief Information Security Officer).

Full Stack Software Engineer – Marani Health

Mar 2022 – Apr 2024 · Full-time

● Built a React annotation app on AWS Amplify that allowed physicians to annotate anonymized fetal and maternal heart-rate data to validate the algorithm effectiveness for an FDA 510(k) submission.

● Refactored legacy Python signal-analysis code for a Bluetooth fetal/maternal monitor into testable units, establishing a comprehensive Playwright test suite (0% to 99% coverage) which was required for FDA 510(k) submission compliance.

Cybersecurity Analyst – Health Tech Defenders

Dec 2023 – Sep 2025 · Contract

● Penetration-tested healthcare web apps and APIs and delivered remediation guidance for HIPAA-regulated environments.

Earlier Experience · 2014 – 2022

● **iOS / Android Developer, festivalPass** (2021–2022): Developed cross-platform React Native app at full parity with web, backed by Node/Strapi; owned store releases.

● **Full StackSoftware Engineer, Lifecycle Insights** (2019–2021): Vue/Node/MongoDB survey app with live data visualization and styled PDF reports.

● **Full Stack Software Engineer, Smart Insurance** (2016–2019): React workers-comp quoting app with multi-state underwriting rules fully compliant with state regulations.

● **Full Stack Software Engineer, RiskPro®** (2014–2016): Developed Highcharts visualization layer in JavaScript client app and refined risk algorithms on a Python backend for a fintech platform on AWS/Lambda.

PROJECTS

● **coffey.codes:** Next.js 16 portfolio blog with a React Three Fiber 3D homepage, MDX blog (23 articles), Playwright test suite that runs in CI/CD against production environment before PRs can merge.

● **Zoo-tron:** A faithful recreation of the Musitronics Mu-Tron III envelope filter as an AU / VST3 / Standalone plugin, developed and packaged with JUCE (C++ application framework)

● **Bugsy - Personal AI agent:** RAG over my repos and docs, live Jira, GitHub and Notion tools through MCP, an LLM-scored job board, and an issue-to-PR coding agent, all hosted on Google Cloud Platform.

● **Support Triage Agent:** Claude agent that categorizes, prioritizes and escalates support tickets with cited help articles. Built spec-first with AGENTS.md/CLAUDE.md steering, Claude Code skills and hooks, and an eval harness with a CI release gate.

● **Simply Voice:** text-to-speech SaaS (React, Firebase, Google Cloud TTS) with Stripe subscriptions and usage quotas. simply-voice-452800.web.app

● **Flutter LabelScan:** mobile price-label scanner using Cloud Vision + Gemini to extract prices and keep a running cart total.

EDUCATION

Gulf Coast State College - Associate of Arts · Graduated May 2012
